

Flame Retardant Polymer Nanocomposites - #0713

Table of Contents

Chapter 1

Introduction to Flame Retardancy and Polymer Flammability

Chapter 2

Polymer Nanocomposite Technology, Fundamentals

Chapter 3

Flame Retardant Mechanism of Polymer Clay Nanocomposites

Chapter 4

Molecular Mechanics Calculations of the Thermodynamic Stabilities of Polymer/Carbon Nanotube Composites

Chapter 5

Considerations on the Specific Impacts of the Main Fire Retardancy Mechanisms in Nanocomposites

Chapter 6

Intumescence and Nanocomposite: a Novel Route for Flame Retarding Polymeric Materials

Chapter 7

Flame Retardant Properties of Organoclays and Carbon Nanotubes and Their Combinations with Alumina Trihydrate

Chapter 8

Nanocomposites with Halogen and Non-Intumescent Phosphorus Flame Retardant Additives

Chapter 9

Thermoset Fire Retardant Nanocomposites

Chapter 10

Progress in Flammability Studies of Nanocomposites with New Types of Nanoparticles

Chapter 11

Potential Applications of Nanocomposites for Flame Retardancy

Chapter 12

Practical Issues and Future Trends of Polymer Nanocomposite Flammability Research
